At Maxis, we don't just make computer games—we make Software Toys™. A toy by definition is more flexible than a game. A game has strict rules to be followed and a single goal to be reached. But a toy, for instance a ball, can be used to play any of dozens of different games—the player sets the goals. Our Software Toys provide worlds to create, enter, explore and control. Players are rewarded for creativity, experimentation and understanding; not for rote memory or knuckle-jerk reflexes. Our toys instill a sense of pride in, ownership of, and responsibility for the player's creation.
